

# SENDING DATA FROM RASPBERRY-PI TO IBM WATSON

Team ID	PNT2022TMID53723
Project Name	Smart Waste Management Using for Metropolitan cities

## AIM:

To send sensor data (or any dummy data) from Raspberry –Pi to IBM Watson .In our case it is DHT sensors Data.

## REQUIREMENTS:

### HARDWARE:

- RASPBERRY-PI (3B)(WITH ETHERNET CABLE OR WIFI CONNECTED)
- USB MOUSE
- USB KEYBOARD
- VGA TO HDMI CABLE
- A MONITOR
- RASPBERRY’S POWER SUPPLY
- DHT-11 Sensor
- Connecting Wires

### SOFTWARE:

- IBM BLUEMIX ACCOUNT

## STEPS TO BE FOLLOWED

### Step-1: Create a device in IBM Watson:

- Firstly, login into your IBM-Bluemix account with your e-mail ID and Password.

- Click on catalog on your dashboard screen, then under platform go IoT.

- Check all details and click on create.

The screenshot shows the IBM Cloud catalog page for the Internet of Things Platform. The page is titled "Internet of Things Platform" and includes a description: "This service is the hub of all things IBM IoT, it is where you can set up and manage your connected devices so that your apps can access their live and historical data." The page has two tabs: "Create" (selected) and "About". On the left, there is a sidebar with "Type Service", "Provider IBM", "Last updated: 08/15/2022", "Category Internet of Things", "Compliance IAM-enabled", and "Location". The main content area has a "Select a location" dropdown menu with "Frankfurt (eu-de)" selected. Below this is a "Select a pricing plan" section with a table showing the "Lite" plan, which includes up to 500 registered devices and a maximum of 200 MB of each data metric, for a price of "Free". On the right, there is a "Summary" section with the following details: "Internet of Things Platform", "Free", "Location: Frankfurt", "Plan: Lite", "Service name: Internet of Things Platform-og", and "Resource group: Default". Below the summary, there is a checkbox labeled "I have read and agree to the following license agreements:" with a link to "Terms". At the bottom of the summary section, there are two buttons: "Create" and "Add to estimate".

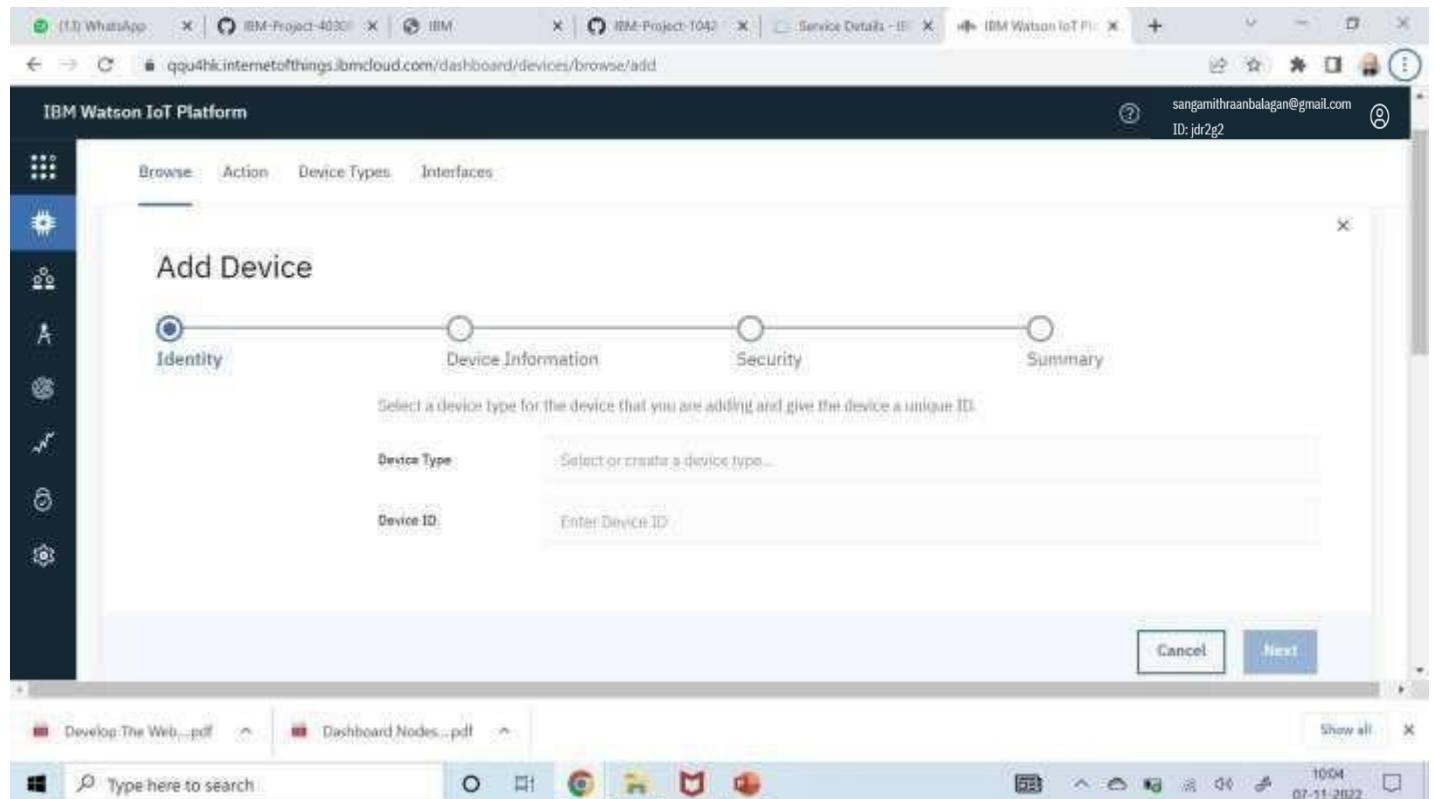

- Click on launch.

The screenshot shows the IBM Cloud service details page for the Internet of Things Platform. The page is titled "Internet of Things Platform-og" and includes a status indicator "Active" and a link to "Add tags". The page has a sidebar with "Manage", "Plan", and "Connections". The main content area features a large graphic of a central square with four smaller squares around it, each containing a different symbol. To the right of the graphic, there is a section titled "Let's get started with IBM Watson IoT Platform" with the text "Securely connect, control, and manage devices. Quickly build IoT applications that analyze data from the physical world." Below this text are two buttons: "Launch" and "Docs". At the bottom of the page, there is a section titled "Ready for the next level?" with the text "IBM Watson IoT Platform Journey". Below this text are two progress indicators: "Lite" (with a checkmark) and "Non-Production" (with a circle).

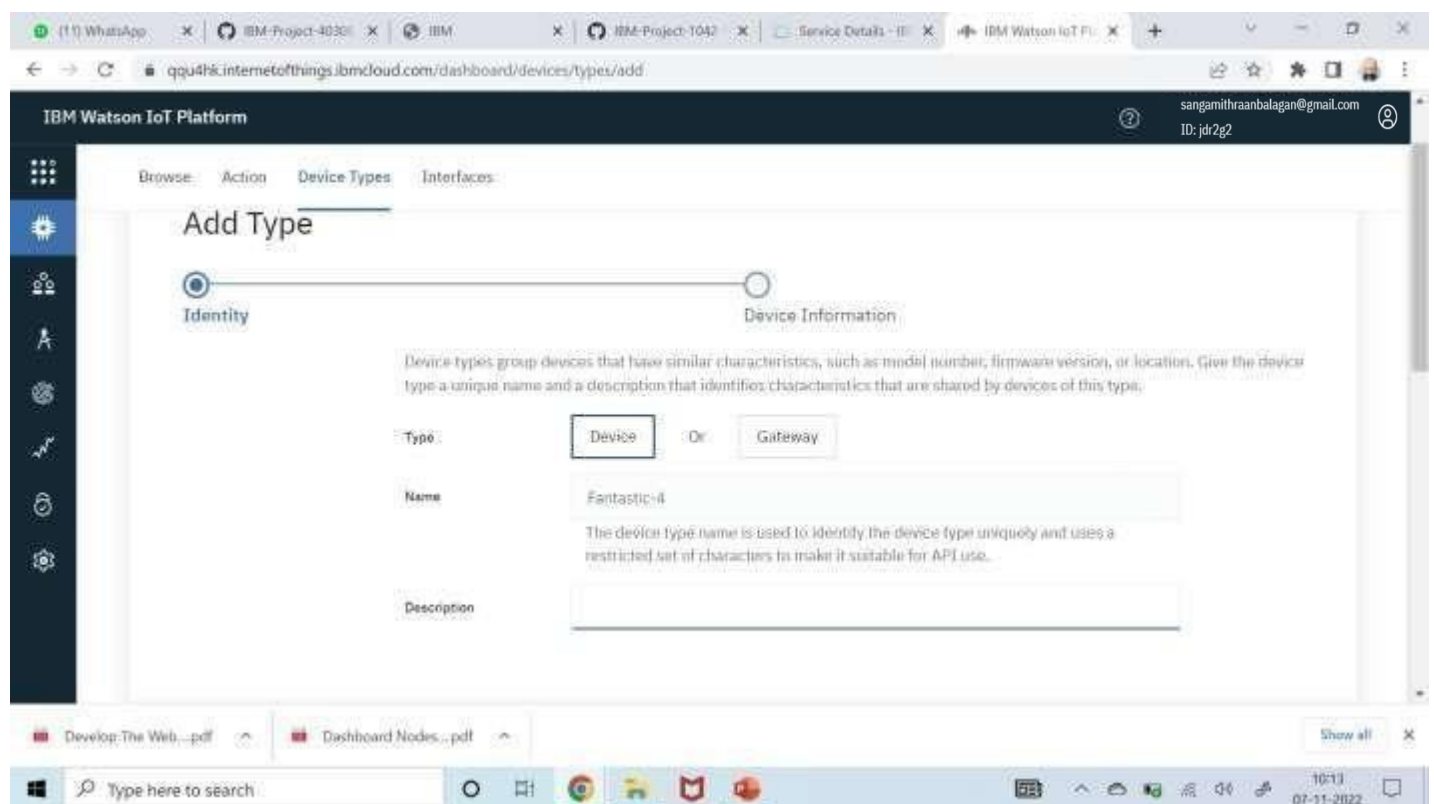

- Dashboard of IBM Watson IoT platform,
- Click on Add device

- After click on Add device this page will open

- Go to device type and fill the details.

- Click on Finish

Device Information

Device types group devices that have similar characteristics, such as model number, firmware version, or location. Give the device type a unique name and a description that identifies characteristics that are shared by devices of this type.

Type

Device

Or

Gateway

Name

Fantastic-4

The device type name is used to identify the device type uniquely and uses a restricted set of characters to make it suitable for API use.

➤ Next

○ Click on Next

The screenshot shows the 'Add Metadata' form in the IBM Watson IoT Platform. The form is titled 'You can modify the default device information and enter more information about the device for identification purposes.' It contains two columns of input fields. The left column includes 'Serial Number', 'Model', 'Description', and 'Hardware Version'. The right column includes 'Manufacturer', 'Device Class', 'Firmware Version', and 'Descriptive Location'. Each field has a placeholder text 'Enter [Field Name]'. Below the fields is an 'Add Metadata' button with a plus icon. At the bottom right are 'Back' and 'Next' buttons. The browser's address bar shows the URL 'qqu4hk.internetofthings.ibmcloud.com/dashboard/devices/browse/add?type=Fantastic-4'. The user's email 'sangamithraanbalagan@gmail.com' and ID 'idr2g2' are visible in the top right corner.

The screenshot shows the 'Authentication Token' selection screen in the IBM Watson IoT Platform. It presents two options: 'Auto-generated authentication token (default)' and 'Self-provided authentication token'. The 'Auto-generated' option explains that the service will generate an 18-character token. The 'Self-provided' option requires a user-defined token between 8 and 36 characters. Below these options is an 'Authentication Token' input field with a placeholder 'Enter an optional token'. A note states: 'Make a note of the generated token. Lost authentication tokens cannot be recovered. Tokens are encrypted before being stored.' Another note at the bottom says: 'Authentication tokens are encrypted before we store them.' The browser's address bar shows the URL 'qqu4hk.internetofthings.ibmcloud.com/dashboard/devices/browse/add?type=Fantastic-4'. The user's email 'sangamithraanbalagan@gmail.com' and ID 'idr2g2' are visible in the top right corner.

Browse Action Device Types Interfaces

There are two options for selecting a device authentication token.

**Auto-generated authentication token (default)**

Allow the service to generate an authentication token for you. Tokens are 18 characters and contain a mix of alphanumeric characters and symbols. The token is returned to you at the end of the device registration process.

**Self-provided authentication token**

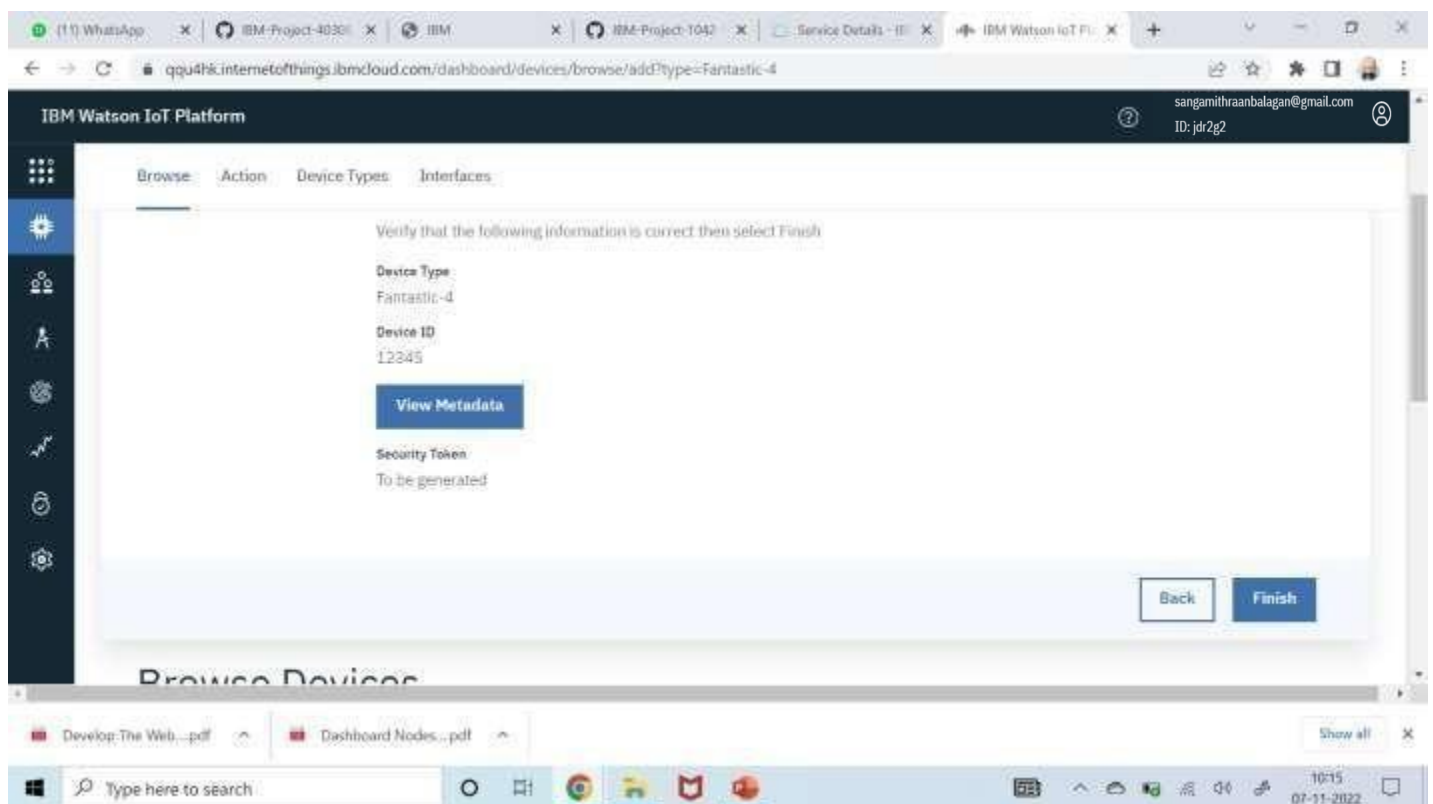

Provide your own authentication token for this device. The token must be between 8 and 36 characters and contain a mix of lowercase and uppercase letters, numbers, and symbols, which can include hyphens, underscores, and periods. Do not use repeated characters, dictionary words, user names, or other predefined sequences.

Authentication Token Enter an optional token

Make a note of the generated token. Lost authentication tokens cannot be recovered. Tokens are encrypted before being stored.

Authentication tokens are encrypted before we store them.

- Click on Finish.

- Device is created.

## STEP-2: INSTALLING NECESSARY PACKAGES ON YOUR PI:

- Now we are going to install necessary packages on your pi.
- Open your terminal in your pi and type the following commands
- `curl -LO https://github.com/ibm-messaging/iot-raspberrypi/releases/download/1.0.2.1/iot_1.0-2_armhf.deb`
- `sudo dpkg -i iot_1.0-2_armhf.deb`
- `service iot status`

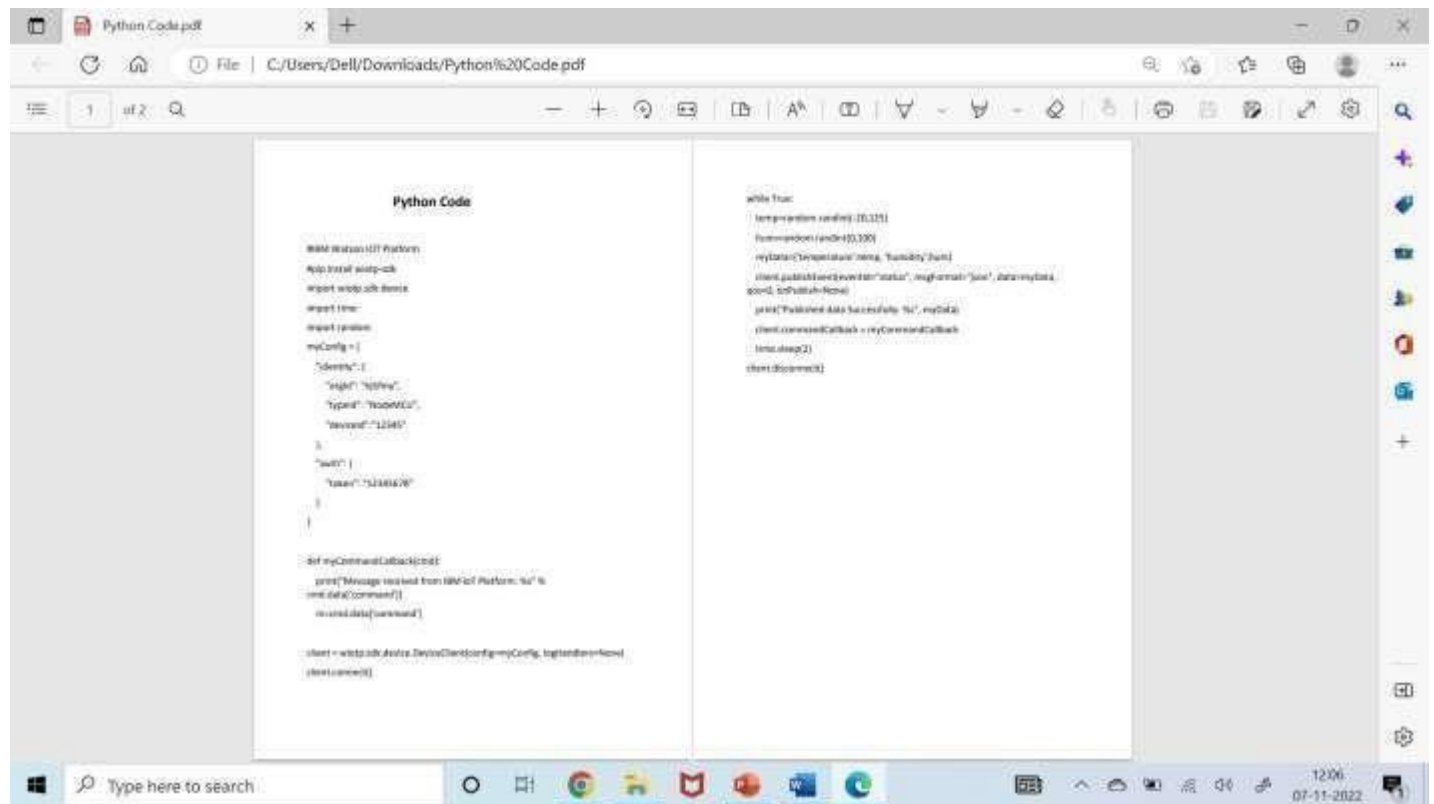

Following are the images as to what appears on your pi's terminal when u type these commands

[illegible]

- Then open your terminal and type `pip install ibmiotf`

[illegible]

- I have sent DHT-11 Sensors data to ibm bluemix .To get the code u need to login into IOT GYAN. ●
- Then I get the image as follows in my pi's shell:

### Step-3: checking your data sent on IBM Bluemix:

- After you have sent your sensors data you can check whether it is received at your iot platform Just look at the image below and if u see the same wifi kind of symbol on your created device then your dta is being received.

- After double clicking on your created device you can see the received data as shown in image

#### Step-4: Creating boards and cards for visualization of data:

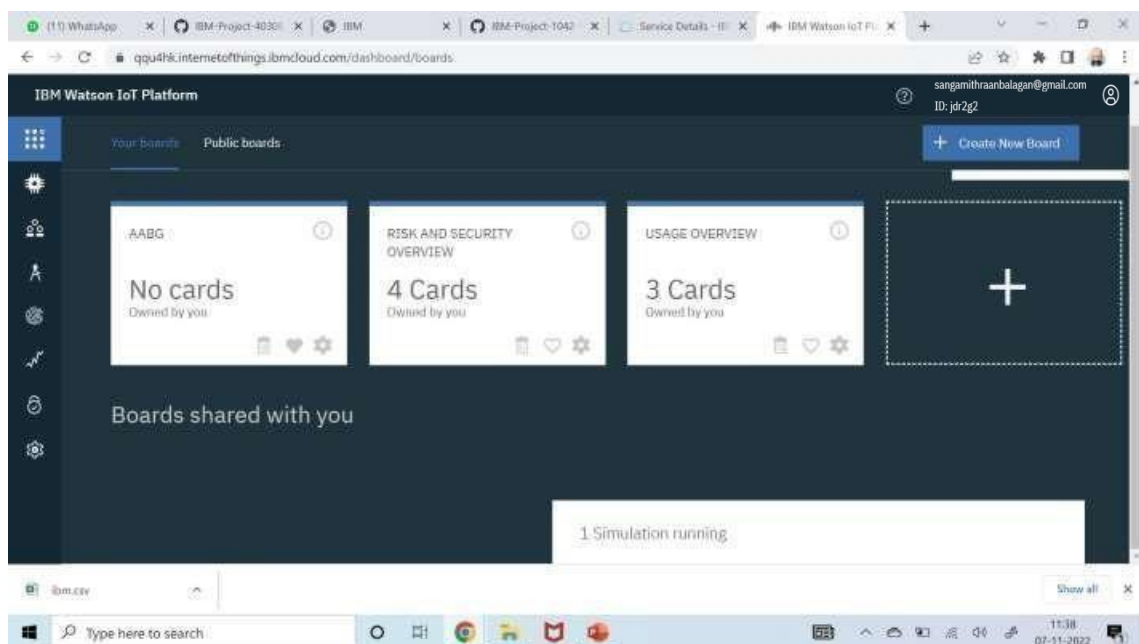

- In your Watson platform you have an option called board .Click on it and you get the following window on your screen

- Click on Create a new board to create a board .
- The given below window appears give a name and description to your board as shown in the window below.

- Then click on Next you get the below window then again click on Sub

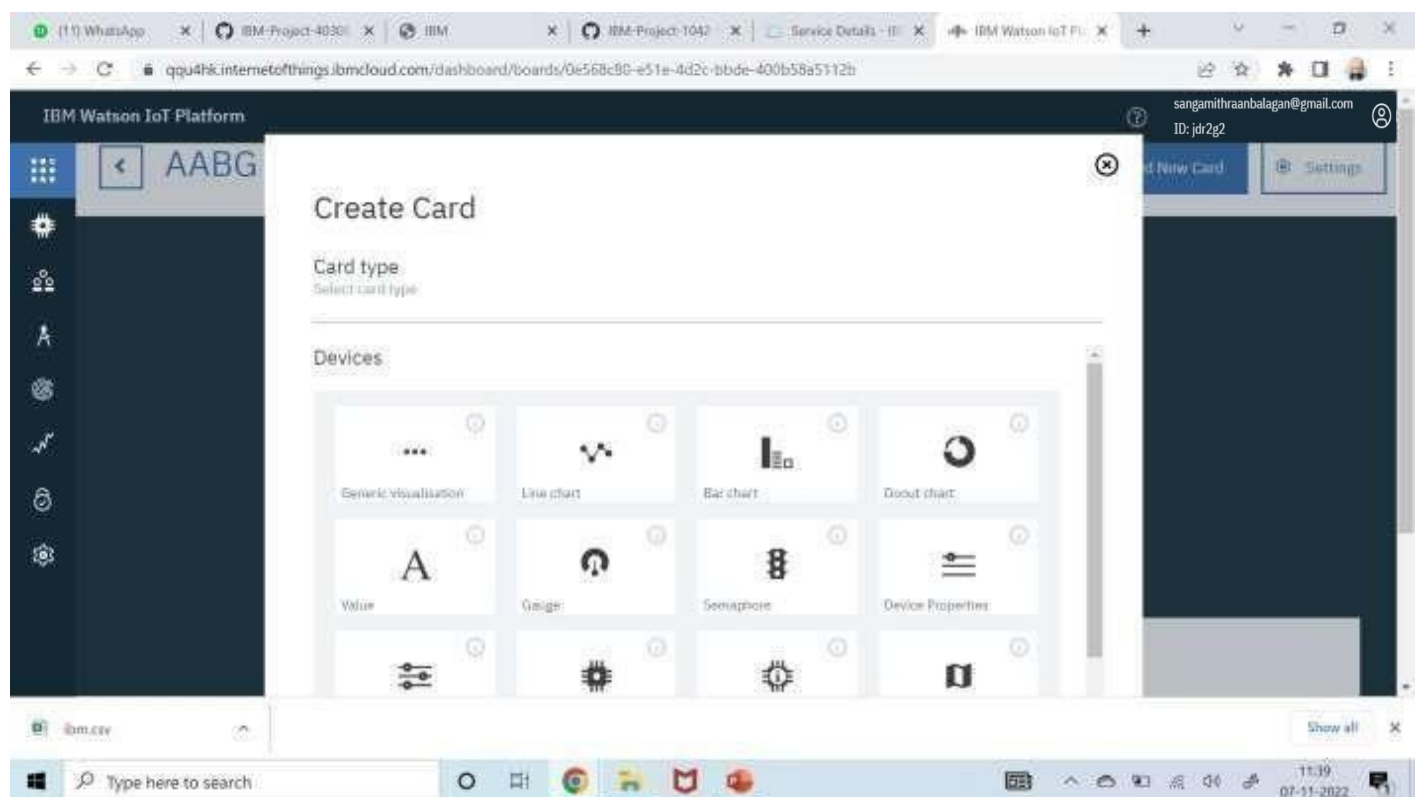

Then double click on your boards name which you have created.

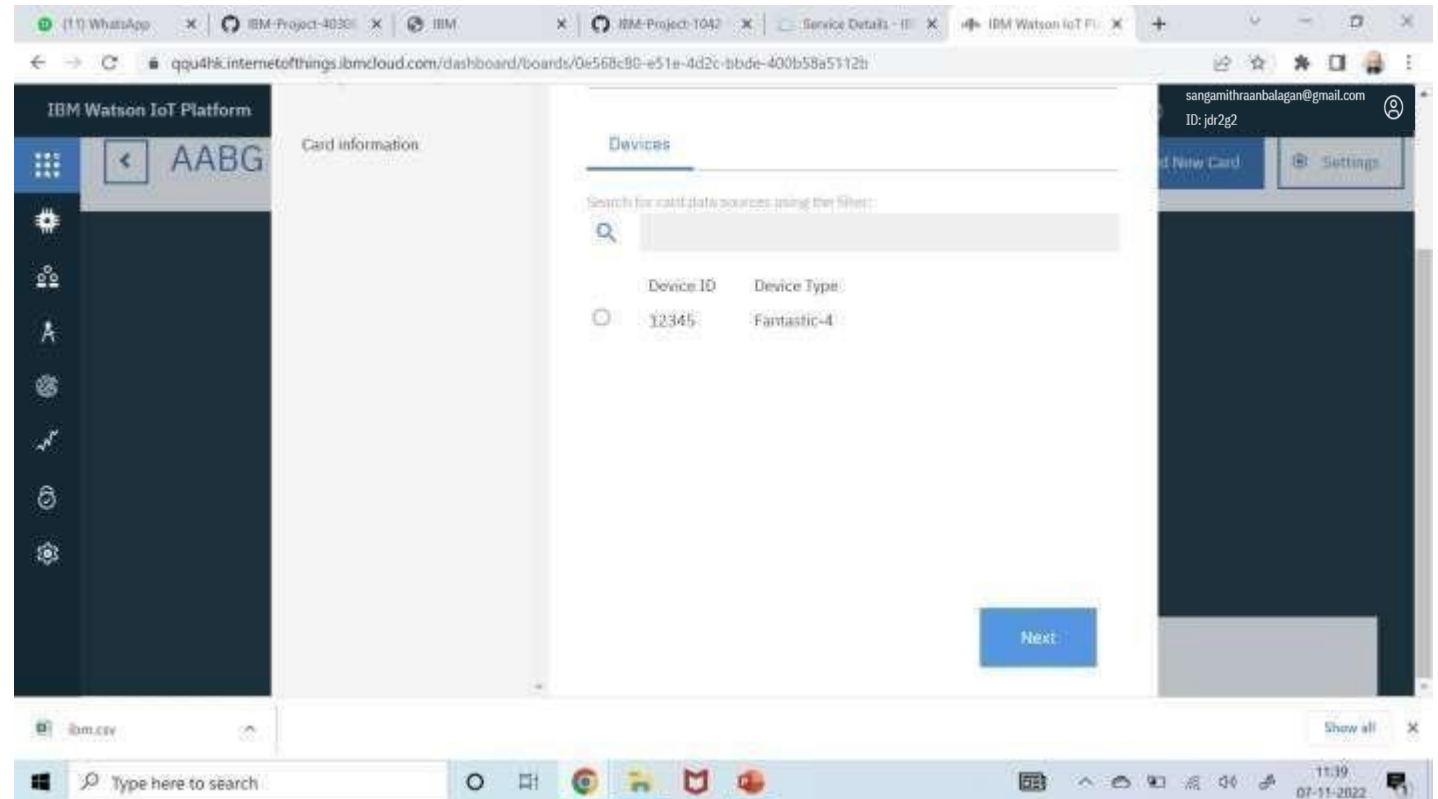

- Click on Add New Card

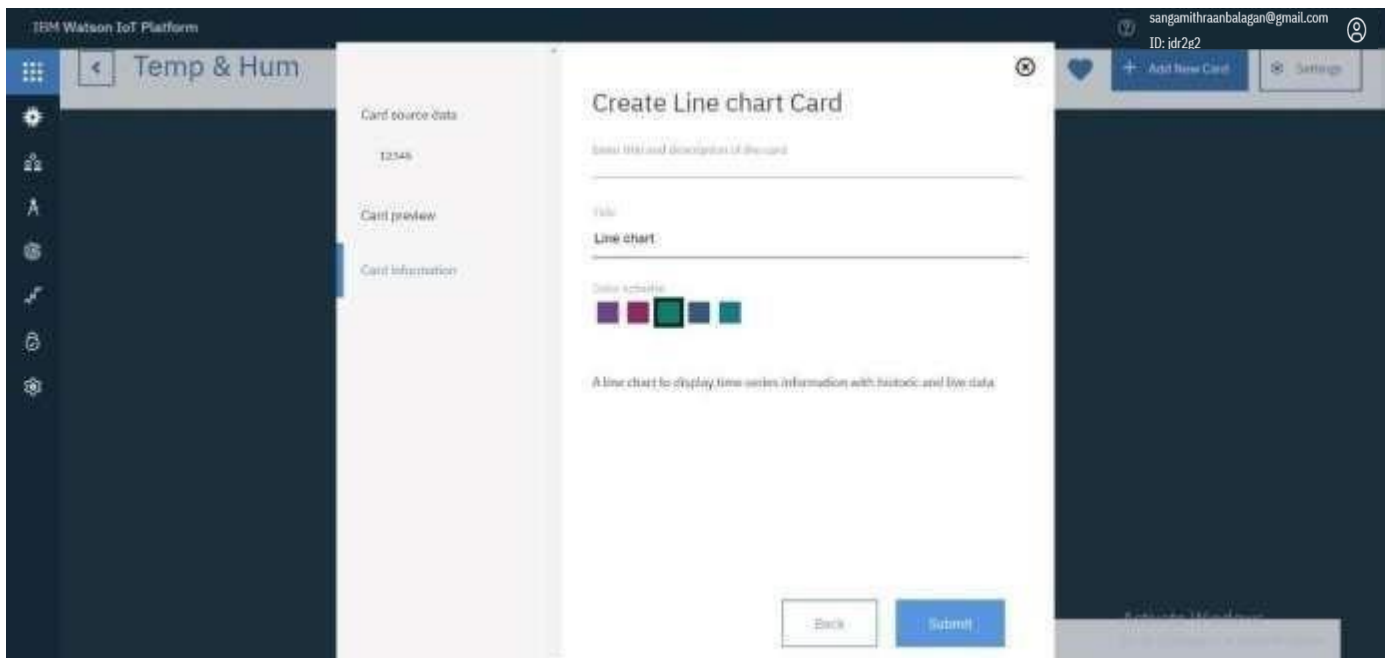

- Select the type of Graph u want accordingly and click next

- You get the below window, choose the Device and click on Next.

- Select the event, properly to be visualized on your graph and click next. In my case it is humidity
- Then select the size of the graph and color of the graph board you want and click next

○ Here is the graph

○ Repeat the process to get different graphs.

## RESULT:

Hence, we were able to send data from our pi to IBM Watson and visualize it on a graph.
